

# Produce high quality promotional products in 5 simple steps

Import designs/images from your files onto workpage

Add 'cut lines' around designs (Click and drag the required shapes from the toolbar)

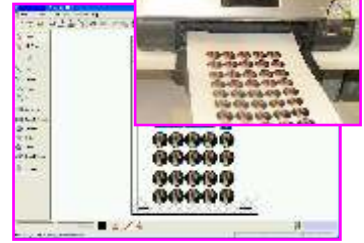

Feed self-adhesive print media into your standard inkjet printer and click 'Print'

## Print out images

1

Mix any shape or size images onto the same sheet !

Free print & cut software bundled with CPL-20

Clear step-by-step instruction manual supplied.

Full colour images, screen grabs, hints and tips feature in this easy-to-understand instruction manual.

Only 6 pages to read!

Once printed, feed print media into the CPL-20 cutting system (CPL-20 simply connects to your PC via a USB port)

Click to read 'registration marks'

Press 'Cut' and the CPL-20 will automatically start to cut around individual shaped labels

## Cut around images

2

Once cut, peel off the top layer and throw away. You are then left with just printed labels which remain stuck onto the backing sheet.

## Discard top layer

3

Place the two-part doming resin cartridge into the applicator gun and dispense shots of resin onto each image; this spreads gradually and clings onto the edge of the label forming a gentle clear dome.

A sheet of about fifty labels normally takes five minutes or so to complete, and the resin is fully cured when left to dry overnight.

## Dispense resin

4

Once dry, simply peel away each dome from the backing sheet and apply to any smooth flat surface. The adhesive is considered permanent, and with normal use, the dome should last the lifetime of the product.

It really is that easy!

## "Peel 'n' stick"
